Subject: Re: Pole Replacements in Kensington

Thank you Scott for the notice, would it be possible to give me the rest of this years program and a minimum of 12 weeks after our folks have met in the field? I think it would help better respond to your needs as your lead times seem to be getting shorter.

Appreciate your effort in working to improve this process.

By the way, I had checked into the Atkinson trimming and found it had already been completed for our construction project. As a result, Verizon will not be participating in your maintenance trim for that area as there will not be a mutual benefit as was the case in Plaistow as discussed during our meeting on January 18th.

Pole Replacements in Kensington

Hi Serge - attached is a listing of poles and associated anchors that we need replaced in the town of Kensington. (note: the Verizon pole #'s listed may not be completely accurate as they were pulled from internal records). We need these poles replaced by May 1st in order for Unitil to begin it's reconstruction work to meet our customer load demands in this area. We will separately send along a 605A for this to further initiate

this request. We met with Dave Kestner in the field on this project February 22nd. Can you please ensure this need date of May 1st is passed along to your construction department. Can you please respond to this email so I am assured you have received it. Thanks, Scott
